

### **1. The used LLM tool**

ChatGPT Default (GPT-3.5)

### **2. Motivation/reason to use LLM**

- To solve some issues that occurred during the development.
- To implement rabbitmq connection with Python.
- To get an assistance to code service2 and monitoring service(Did not familiar with JavaScript)

### **3. How and why LLM helped**

It helped me to sort out some issues in my code. Especially in service2 and the monitoring service. I am not that much familiar with the JavaScript

### **4. What kind of mistakes LLM did**

It did not find a proper solution to wait for the services till rabbitmq starts, in both service2 and the monitoring service.

### **5. What were things that LLM was not able to provide**

I asked about how to get the IP address of service2 using Python. But it did not provide me an accurate answer and, also for up and running the service 1 till docker-compose down command.
